EXPERT INSIGHT — OCTOBER 2026

100.0% of night alerts are arrivals — runway 02 approach path crosses Lisbon at 160m altitude. **TAP Air Portugal** operated 4,802 flights (48% of total), including 708 at night. **Sound meter read low 13–23 October** (microphone cable fault, strongest 16–19 Oct): loud events and alerts in that window are undercounted. New enclosure and two-point calibration on 24 October.

Night Alerts — Full Detail

Why two windows? ANAC's official regulatory window is 00:00–05:59. We also track our own wider **Extended window (23:00–06:59)** because a full night's rest for residents doesn't start and stop exactly at the legal boundary — a loud approach at 23:15 or 06:45 still disturbs sleep, even though it falls outside ANAC's jurisdiction. Extended-window alerts outside 00:00–05:59 are **not** regulatory violations — they're the same noise thresholds applied for resident-experience tracking only.
Thresholds (fixed, same as archive.html): 🔴 Red ≥ 98.9 dB (ANAC's absolute night limit) · 🌟 Yellow 93.0–95.9 dB (ANAC level 2, exempt 00:00–00:30 and 05:00–06:00) · 🟠 Orange 95.9–98.9 dB. **Orange is not an ANAC-defined tier** — the regulation itself only defines Yellow and Red, with nothing in between. A flight at 97 dB (just 1.9 dB under the absolute ban) used to fall through that gap and vanish from every count. Orange closes it: our own tracking, same spirit as the Extended window, never presented as a legal violation.
Daytime loud events are reported separately, further below, with no ANAC threshold applied — the regulation only covers night hours.

⚠ **Measurement note (October 2026):** from 13 to 23 October the sound meter read too low. A loose contact in the microphone cable (dropouts on 16–17 Oct) was followed by a replacement cable with a faulty ground (18–24 Oct). On comparable landings, peaks were about 3 to 6 dB below normal, most strongly on 16–19 October, so loud events and alerts in that period are **undercounted** (0 to 4 night alerts per day, against 8 to 19 on the other days). The values were not corrected: there is no reliable correction factor. On 24 October the station moved into its new enclosure with a two-point calibration (94.0 / 113.8 dB); night background levels dropped by about 10 dB, and 8 arrivals were missed during the installation. 41 flights whose level could not be verified are excluded from all dB figures. Full dated list: lisbonfinals.com/archive.html, Data Quality tab.
